

Project - Real-Time Task Management System

Functional Requirements

- User login/signup
- Create tasks
- Assign tasks to users
- Task status (Todo → In Progress → Done)
- Real-time updates (important for system design)

1. Client Layer

- React app
- Calls APIs
- Listens to real-time updates

2. Backend Layer (Get / Post / PUT)

- REST APIs:
 - /login
 - /tasks
 - /assign
- Handles authentication + business logic

3. Database Layer

- Collections:
 - Users
 - Tasks

Example Task

```
{
  "title": "Fix bug",
  "assignedTo": "userId",
  "status": "in-progress",
  "createdAt": "timestamp"
}
```
